

## Fact Sheet

### What is CBD and CBG Isolates?

#### ≥ 99% CBD Isolate

**CBD Isolate is a pure, crystalline, flavorless pharmaceutical grade powder that is 99+% pure CBD. All of the hemp plant matter is removed from the isolate, including oils, waxes, chlorophyll, and more, resulting in CBD powder that is nearly chemically pure. That degree of purity makes it extremely easy to dose accurately. Since it is flavorless, it can be easily introduced into products without altering the flavor profile.**

**CBD isolate is purified to the extent that only the cannabidiol molecule remains, but our supplier still test this product to ensure that it is free of contaminants and offers the potency we claim. We test our products at every stage of the production process to provide total transparency and reliability.**

**This powdered extract contains non-detectable levels of THC, which means that if our CBD isolate contains any THC at all, there isn't enough of this intoxicating cannabinoid present to register with even the most advanced testing equipment. CBD isolate is a type of hemp extract that has been purified so that almost all other substances aside from CBD have been eliminated. Our Supplier of CBD isolate routinely tests at ~99% purity, which makes our CBD isolate one of the purest ingredient options for our CBD Transdermal market.**

#### ≥ 98% CBG

**CBG Isolate is CBG in its purest form—a pure white powder almost exclusively composed of CBG. CBG Isolate has the highest potency of any CBG-specific products at over 98% CBG.**

**Although CBG is commonly considered a minor cannabinoid, when it is extracted into a pure form it has an entirely distinct set of properties compared to CBD.**

**CBG Isolate is primarily used in topical form such as in cosmetics, but is also utilized in soft gels, pressed pills, and tinctures. This raw material is particularly valued when targeting and siloing the CBG cannabinoid is important.**

**This powdered extract contains non-detectable levels of THC, which means that if the CBG isolate contains any THC at all, there isn't enough of this intoxicating cannabinoid present to register with even the most advanced testing equipment. CBG isolate is a type of hemp extract that has been purified so that almost all other substances aside from CBG have been eliminated. Our Supplier of CBG isolate routinely tests at ~99% purity, which makes our CBG isolate one of the purest and options for our CBG Transdermal the market.**
